Hi, My name is **Non-responsive based on revised scope.** and I live at **Non-responsive based on revised scope.** right below the Sedat 3A injection well. I am emailing my concerns and comments towards the Sedat #4A injection well.

I would never have imagined having to deal with all of the e daily naucen e and concern , when my husband and I decided to move into my Grandmother's home. I always remember how quiet it was sitting outside with my Gram under the apple tree on a summer day, overlooking the pasture and hillside enjoying a gla of ice cold well water Now you can hear truck every hour and think to your elf, "there goes another load of carcinogenic material to be dumped", and I wouldn't dare drink our well water. It has been tested showing higher than the recommended levels of several elements and a higher pH.

Truck traffic ha been e ce ive! There i one truck on average every 40 min or le between 5am 2pm I was able to shoot a live video on Jan 7th showing 5 trucks going to and from the injection well site in less than an hour. Some trucks are even tailgating one another coming to and from the sites. Traffic picks back up around 9pm and does not stop all night long. I am concerned about the truck emissions, noise levels and concern for speeding and most of all concern for what they are carrying. The truck traffic will double stop now the Sedat 4A site is operational. There is already damage to the Rd from heavy traffic. I had filed a complaint with Penndot regarding portion of the road caving in and eroding away

I am concerned for my and my family's health. We will always be concerned about the probability that our water may be contaminated. I had filed complaints with the DEP and EPA regarding changes to ta te, odor, and coloration to mine and my family' water ource ince the fir t ite went active

I have filed several complaints with the DEP and Allegheny Health Department regarding concern for a chemical odor in the air. On days the odor is strong it does cause headaches. I have an air quality monitoring device on my property that record data 24/7 and ha hown VOC (Volatile Organic Compound) spikes.

When I learned that Penneco wanted to put a second injection well at the same site, I was devastated. We had attended the EPA public meeting prior to the approval of the first site and have attended Plum council and zoning board meeting to e pre our concern and oppo ition to the e ite I can already assume the Sedat 4A site will be permitted and operational soon, this is just another "formality". I want my comments in record for my opposition to the Sedat 4A site. The risks of toxic chemical and radioactive contamination of air quality and drinking water, mine ub idence and the potential for earthquakes and road degradation from hundreds of trucks are all reasons for our opposition to the current and 2nd sites.

Sincerely,

Non-responsive based on revised scope.
